

## Academy

*Academy is a special post-specialization training program in the field of gynecological endoscopic surgery.*

As Academy, we focus on candidates who think that they have not received sufficient training in this field during their specialty training or wish to gain further experience in their discipline. Academy training programs are held under the mentorship of Prof. Dr. who broke new ground in the field of educational programs and made his way into Turkish medical literature with his research. The training programs we aim to implement as Academy include different options such as Fellowship, Hands-on, Masterclass, Cadaver, and Animal Lab. Prof. Dr. one-on-one training programs aim to bring a new perspective to the field.

### Our Programs

- Fellowship Program
- Robotic Surgery Program
- Masterclass Program
  - Laparoscopic Hysterectomy
  - Laparoscopic Myomectomy
  - Laparoscopic Endometriosis
  - Laparoscopic Urogynecology
- Hands-on Program
- Cadaver Program
- Animal Lab Program

## The Fellowship Program

The Fellowship Program is a special training program designed for gynecologists who have just received specialization training and wish to improve themselves, as well as gynecologists who have spent years in the profession but want to use applications such as laparoscopy and robotic surgery more actively and wish to further improve themselves in these fields. All our colleagues who wish to improve themselves both theoretically and surgically (Live Surgery, Simulation) and improve their skills and experience with a team of experts are invited. This program, developed for our colleagues who think that they cannot receive adequate training in large groups, is a one-to-one training aimed to overcome the lack of education in this field.

### The Masterclass Programs

The Masterclass Programs is designed to refresh knowledge, which has become a necessity with the rapid developments in Gynecological Endoscopy, and it consists of two days of training, including theoretical training and operating room training. In the one-on-one courses with Prof. Dr. a pioneer in the field of gynecological endoscopy, theoretical and practical experience are offered holistically. A maximum of 5 trainees can attend our one-on-one training sessions with the mentor.

The Masterclass Program is planned as 5 different trainings.

- Laparoscopic Hysterectomy
- Laparoscopic Myomectomy
- Laparoscopic Endometriosis
- Laparoscopic Urogynecology

## Robotic Surgery

The Robotic Surgery Program consists of a total of two days of training including theoretical and operating room training. A maximum of 5 trainees can be admitted to the Robotic Surgery program. The aim of the training courses that will be taught one-on-one by Prof. Dr. \_\_\_\_\_ is that the candidates learn the steps of robotic surgery with the Da Vinci X in the most accurate way. Detailed information about what can be done with robotic gynecology surgery and techniques and tips are included in the training courses in the Robotic Surgery Training Program.

## Hands-On Program

The Hands-on program will cover two courses; hysteroscopy and suturing. In simulators, the aim is to improve surgical dexterity. Operating room training will be added to this in the hysteroscopy course.

## Cadaver Program

The Cadaver Program offers the opportunity to work one-on-one with the instructor on the cadaver so that they can try the procedures that they will use with patients in the future and learn about the delicate anatomical structures between the tissues and the invisible dangers.

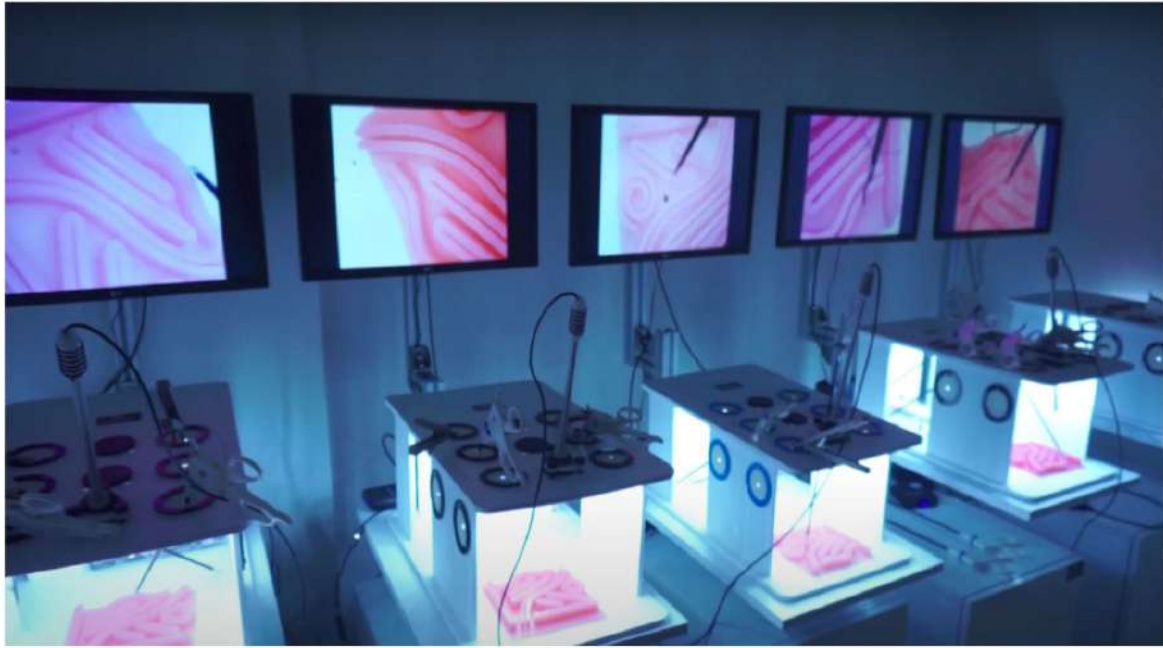

## Animal Lab Program

In the animal operating room courses, which are among the course contents of Academy, training is given with experimental animals (pigs) produced for experimental purposes under modern conditions.

Where are Academy Programs held?

Theoretical and Suture Trainings;

Suture and theoretical training will be held in our specially designed suture boxes for you to practice and in our room designed for theoretical training.

Operating Room Trainings

Özel Sağlık Hospital serves its doctors in the operating room with its state-of-the-art medical equipment, especially Davinci X robotic surgery.

Hotel

Alachi Hotel

Alachi Hotel, which was designed unique architecture of Alacati has 14 delightful rooms. Our mission is serving peaceful and pleasant holiday as well as a feeling our guest at home.

You can enjoy the summer decorated with flowers in the garden, in the winter time, you can enjoy with your friends at the fireplace. You can also enjoy our SPA and traditional Turkish bath and sauna during the winter season.
